Neuryo v5.1 prototype buy plan

7 Nov 2026 · one order, ₹50,000 grant · prices read on the seller pages on 7 Nov unless marked est. (yellow rows) · USD at ₹94.05 mid-market (x-rates, 7 Nov 16:25 UTC), ₹97.34 on the card (about 3.5% markup)

What	When	Total
Domestic orders: Upside Down Labs, Robu, Robocraze, Amazon, ToolBuy, chemist (frame mock-up, electrodes, consumables, bench electronics)	Order now	₹13,719
FRI TDE-211 Ag/AgCl pod cores × 4 (import, through VIT)	After the headphone mock-up passes on 10 heads	₹7,460
ADS1299 rev B board × 2, assembled at JLCPCB (import, through VIT)	After the schematic is reviewed by your professor	₹25,723
Total, imports through VIT		**₹46,902**
If the lab already has PETG, a 0.01 g scale and a caliper (−₹1,468)		₹45,434
If both imports go as personal imports instead (42.08% duty)		₹56,288

Recommendation. Order the domestic lists now (₹13,719), run the mock-up test, then place the two imports through VIT. That lands at about ₹46,902, ₹3,098 under the grant. The board is 55% of the money and the only line that is still an estimate in parts; get the real JLCPCB quote the day the Gerbers are ready. If the board goes as a personal import, you are about ₹6,288 over; the fallback below (gold cups instead of FRI) claws back about ₹6,491.

3 · Cheaper options and what not to buy

Option	Effect	Link
UDL gold cup electrodes, pack of 10 (₹2,999, 10 mm, 1 m lead, 75 in stock) instead of FRI	Saves about ₹4,461 through VIT (₹6,491 vs a personal import), ships free in the UDL order. Trade-off: gold-plated, not Ag/AgCl, so more slow drift with saline; your semi-dry evidence is for Ag/AgCl. Use only if the board comes in over budget.	store.upsidedownlabs.tech/product/gold-cup-electrod…

Option	Effect	Link
Pivot bar, steel strip and pod springs: not needed	v5.1 replaces the bar, size-hole rows and spring carriages with a midline strap: non-stretch webbing with size holes over Fz–Cz–Pz, elastic at the ends. Its tension presses all three pods. The front Y clip, pod caps, slider and hole jig are PETG prints.	
TPU filament (₹2,149 in the old plan): drop it	The 2 mm silicone sheet (₹459) covers temple pads, hook pad and linings.	
ESP32-S3 DevKitC (₹1,299): drop it	The second XIAO does the bench firmware on the same chip and pins as the board.	
Also not needed	PA12 midline band (v4 only), brass heat-set insert kits (₹1,129+; use M3 nuts in printed pockets), torsion-spring kit (₹1,734; reuse a binder-clip or clothes-peg spring for the ear clip), separate BMI270 breakout (on the board), NuPrep and Micropore (alcohol swab prep only), PVA powder and glycerol for the hydrogel tip (only if the damp foam tip fails the drying test).	
Only if a test fails	Weaver Ten20 paste, 228 g, ₹1,890 on Amazon: only if Neo Gel on the mastoids fails the impedance check. Check the seal and expiry on arrival.	amazon.in/dp/B075C3M2M7

4 · Checks before paying

• Re-open each link on the day you pay; pay if the price is within 15% of this plan. Prices and stock change daily.
• Koss KPH7: the listing gives "Metal, Plastic". Before cutting, confirm the band is spring steel with sliders; if it is plastic, return it and use another headphone with a visible steel band.
• Witty Fox 1000 mAh: the page gives no size or connector. Check it fits the right pod and add a JST-PH 2.0 lead if it has bare wires.
• Midline strap: hang 140 g (1.4 N) on a length of the elastic and mark the stretch; that mark sets the tension on every fitting. Punch the webbing size holes through the printed jig, not by eye.
• Ask VIT purchase whether the JLCPCB and FRI orders can go through the institute import route; the ~10% duty here is the 7 Nov plan's assumption, not a quote.
• Recheck ADS1299 stock and price at JLCPCB on the day you order ($70.817, 419 in stock on 7 Nov). The extended-part count (12) and PCB price are estimates until the BOM exists.
• Robu: the 1000–1500 mAh LiPo cells (WLY803040, WLY102050, WLY103048) were all out of stock on 7 Nov, which is why the battery is from Robocraze.
